(formerly known as Intel Security, and Network Associates prior to that) It is not available as a standalone package, but is included in McAfee LiveSafe, McAfee AntiVirus Plus [1] and McAfee Total Protection.. sh was copied - Run the command: chmod +x install.sh - Run the command: ./install.. I did pull the install.sh file from the location you mentioned and ran the following commands which were in the readme file.

6 Apple Mac OS X NOTE: Endpoint Protection for Mac was previously known as Security for Mac.. So far I only the had the problem on one MAC 10 5 system not showing up I have loaded the agent on 12 other machines and they all worked fine.. You do need to remember that the EPO 4 0 agents for Windows and MAC by default give no access to the port.. I also rebooted after the install - Copy the file install sh from the repository selected in the previous step to the target Macintosh client(s).. 7 on our PCs - no problems so far As we support a number of MACs as well, I have started looking at deploying and monitoring VirusScan 8.. - Log on to the target client as "root" McAfee Virusscan 8 8- On the client, open Terminal, then switch to the location to which install.. We have 1 McAfee VirusScan for Mac 8 6 manual available for free PDF download: User Manual McAfee VirusScan for Mac 8.
